Making Hydrogen Easy®

## BAYOGAAS® HYDROGEN HUB

Located at the Port of Stockton in Northern California, BayoTech's hydrogen hub will produce 2 tons of high-purity hydrogen daily, offering supply pressures up to 520 bar (7,500 psi). Delivered in BayoTech's high-pressure transport trailers, more hydrogen is carried per load, making deliveries more efficient and maximizing the amount available for your operations. With operations set to begin in 2025, the hub will provide convenient hydrogen delivery and pickup options for local customers.

## WHY CHOOSE BAYOTECH?

### Low Transportation Costs

For hydrogen, local production is a gamechanger. By minimizing the transportation distance we're able to offer hydrogen at the lowest cost available.

### Flexible Supply Contracts

Tired of being locked into a long-term contract with an unreliable supplier? BayoTech offers flexible supply agreements to meet your needs.

**We're committed to customer satisfaction. Hydrogen supplied when and where you need it. Period.**

## BAYOGAAS® HYDROGEN MOLECULES

**Purity** Meets SAE J2719 standard for fuel cell vehicles. 99.999% purity available up on request.

**Pressure** 520 bar

**Options** Contracted volume pickup or delivery to customer site.

## DEPENDABLE SUPPLY

At BayoTech, we're making your hydrogen supply more reliable by building a network of local production hubs, reducing the need for long-distance transportation and cutting down on potential supply disruptions. With hydrogen produced closer to where you operate, you benefit from a steady, cost-effective supply that lowers emissions. Plus, our high-pressure delivery options ensure you get the hydrogen you need, when you need it, with the flexibility to meet your specific demands.

# FOR MORE INFORMATION

Industrial gas suppliers, fleet operators, fuel cell equipment manufacturers, and industrial hydrogen users can learn more about BayoTech's hydrogen supply and distribution solutions by contacting BayoTech at **info@bayotech.us**.
