

G-Pak for CNG

Support natural gas operations with easily transportable, pickup truck mounted CNG storage and dispensing solution.

The flexibility to move low volumes of compressed natural gas via pickup truck is key to reliable customer support. Whether it's providing emergency vehicle refueling or gas to support minor repairs at customer sites, look to BayoTech's G-Pak product line.

BayoTech's G-Pak carries up to 5,800 scf of compressed natural gas and is designed to be in the bed of a standard pick-up truck. Composite, Type III cylinders provide a lightweight, high-pressure package for storing compressed gas. Fuel is dispensed, via regulator, directly from the unit via a hose and nozzle.

There's a reason that the major gas utilities in North America turn to BayoTech's line of CNG transport products: cost-effectiveness, high reliability, safety, and customer support like no other. BayoTech is the leader in manufacturing composite cylinder-based gas transports, towable by pickup truck, with over 600 trailers and storage units delivered. We specialize in innovation to the point of designing and manufacturing the best valves and thermal protection systems in the industry. This innovation is driven by listening to our customers and being a solution provider, not just another vendor.

Contact BayoTech to learn more about our solutions for natural gas utilities:

- » Large trailers for bulk CNG transport to support a virtual pipeline
- » Competitive rental and lease programs to provide budget flexibility
- » Hydrogen injection and blending equipment and supply programs.

FEATURES

- » Lightweight system can be mounted in a standard pickup truck
- » High-capacity Type III cylinders (aluminum liner wrapped in carbon fiber)
- » Compact footprint for easy access to operational sites
- » No commercial driver license (CDL) or hazmat endorsement required to transport

APPLICATIONS

- » Emergency refueling of CNG vehicles
- » Operational activities, such as meter changeouts and minor pipeline repairs
